About

I am a Fullstack PHP developer with over 15 years of experience, specializing in:

PHP with Laravel Backend

- Development of reusable components using Livewire, Stateful, and Stateless for efficient communication between frontend and backend.
- Expertise in developing Controllers, Views, Routes, Models, Seeders, and Migrations.
- Event management for communication between components and dynamic UI updates, along with real-time data validation, enabling a smooth user experience with instant feedback and interface updates without the need to reload the page.
- Execution of real-time CRUD operations using Livewire, with support for pagination via Livewire Pagination. Dynamic filtering and searching without page reloads. Simplified file uploads and background processing.
- Combination of Livewire + Alpine.js to create reactive interactions with better performance.
- Utilization of Tailwind CSS for dynamic and responsive component styling.

Frontend and Layout

- Componentization and code reuse following Atomic Design patterns.
- Development using Charts.js for data dashboards.
- State management with React Context API and Redux Toolkit.
- Use of React Hooks (useEffect, useContext, useMemo, useCallback) to optimize rendering.
- Development of SSR (Server-Side Rendering) and SSG (Static Site Generation) with Next.js for SEO performance.
- Implementation of dynamic routing with Next.js (getStaticProps, getServerSideProps) to optimize the delivery of dynamic content.
- Composition of reusable components with Vue 3 Composition API and Options API.
- Development of interfaces with Vue Directives, using v-bind, v-if, v-for, v-model.
- Use of Vue Router to create Single Page Applications (SPA) for dynamic navigation.

WordPress / WooCommerce

- Extensive experience in developing websites and portals, creating custom plugins and themes to meet specific business requirements, ensuring modularity and easy maintenance.
- Utilization of Hooks (Actions and Filters) and Shortcodes to extend WordPress functionalities without modifying the core, enabling flexible integrations.
- Use of ACF, Custom Post Types (CPTs), and Custom Taxonomies, offering customized content organization within WordPress.
- Security and best practices in plugin creation, using Nonces, Sanitization, and Escaping to prevent vulnerabilities such as XSS and CSRF.
- Plugin compatibility with Gutenberg Blocks, allowing a more dynamic content editing experience.
- Website creation with Elementor Pro.

Experience with Version Control, Containerization, and AWS

Hobbies

I am a multi-instrumentalist; I play acoustic guitar, electric guitar, keyboard, drums, and bass. In my free time, I enjoy traveling, camping, surfing, playing soccer, and going to the gym.

- Proficiency in using GIT commands such as branching, merging, rebasing, and conflict resolution.
- Management of private repositories and CI/CD pipelines using Bitbucket, configuring automation for continuous testing and deployments.
- Skilled in creating Docker Compose, Dockerfiles, volumes, and networks, and managing containers for development and production environments.
- Experience in administering and configuring AWS EC2, S3, and RDS instances, deploying applications, databases, monitoring, and scaling according to demand.

Experience with Agile Methodologies

- Participation in development sprints following agile methodologies, ensuring incremental and collaborative deliveries.
- Use of Jira for planning, task tracking, and backlog management, applying Scrum and Kanban.
- Continuous communication and alignment via Slack, facilitating team collaboration and real-time progress tracking.

Últimas Experiências Profissionais

Fullstack Developer, Pilgrims Consulting, Curitiba

MAY 2023 — PRESENT

Position

Web Development and Project Management.

Responsibilities

Working as a web developer, responsible for the development of all websites for the MFM Group.
